

THOUGHTFULL · DESIGN SYSTEM V2

Design System — built from the ThoughtFull mockup

Palette, type, spacing and components as code, matched to the 4-screen high-fidelity mockup (Splash · Dashboard · Philosopher Card · History).

A. The palette, as a ColorScheme STEP A

Colors pulled directly from the mockup: #F5F5F5 · #0F2934 · #1F637B. Everything else below is generated from the seed so contrast stays safe.

primary
#1F637B
header bars, splash background, main button

onSurface / ink
#0F2934
headline text, phone/card borders, dark mode base

surface / background
#F5F5F5
screen background (Dashboard, History)

surfaceContainer
#FFFFFF
quote card, book tiles, accordion panels

secondaryContainer
#E3EEF1
"Stoicism" tag chip fill

onSurface (#0F2934) on surface (#F5F5F5) — body text on the Dashboard background. Passes 4.5:1.

onPrimary (#FFFFFF) on primary (#1F637B) — button and header-bar label text.

ROLE	HEX	USED FOR
primary	#1F637B	header bars, splash screen fill, "Pick a Philosopher" button
onPrimary	#FFFFFF	text/icons on primary — button label, header title
secondary / secondaryContainer	#1F637B tint → #E3EEF1	ideology tag chip ("Stoicism")
surface	#F5F5F5	screen background
surfaceContainer	#FFFFFF	quote card, biography/philosophy panels, book tiles, history rows
onSurface	#0F2934	body text, headings, card borders
error	#BA1A1A (M3 seed default — not shown in mockup)	validation states, destructive actions (none in current screens)

```
// lib/theme.dart — matches the mockup's 3 brand colors exactly
final scheme = ColorScheme.fromSeed(
  seedColor: const Color(0xFF1F637B), // primary, from the header bars/splash
  brightness: Brightness.light,
).copyWith(
  surface: const Color(0xFFF5F5F5), // exact screen background
  onSurface: const Color(0xFF0F2934), // exact ink color
);
```

Contrast & dark mode

Contrast check	Body text #0F2934 on background #F5F5F5 and on white cards both clear 4.5:1 — checked with WebAIM's contrast checker. Header-bar white text on #1F637B also clears 4.5:1.
Dark mode	No — light only. Decided now, deliberately, not by default: the mockup is a single light theme across all 4 screens, and building a second contrast-checked ColorScheme plus a darkTheme: switch is not worth the remaining term time. To keep that door shut cheaply, every fill still pulls from Theme.of(context).colorScheme rather than a literal Colors.white or Color(0x...), so revisiting this later would not mean hunting down hardcoded colors first.

B. The type scale, as a TextTheme

Three families appear in the mockup: Poppins for headings, Work Sans for reading copy, Raleway (letter-spaced, uppercase) for eyebrow labels and tags.

Marcus Aurelius

Heading → headlineSmall · Poppins, 24px, Bold (700) · screen titles, philosopher name, app wordmark

"You have power over your mind, not outside events. Realize this, and you will find strength." — the quote card and biography copy on the Philosopher Card.

Body → bodyMedium · Work Sans, 15px, Regular (400) · quotes, biography, philosophy paragraphs

ROMAN · 121 – 180 AD

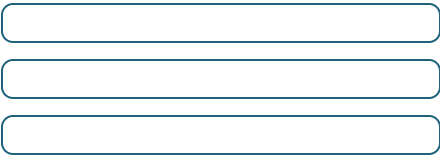

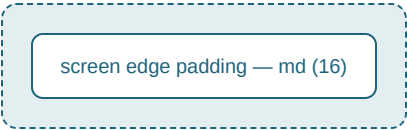

Caption → labelSmall · Raleway, 11px, SemiBold (600), 1.6px letter-spacing, uppercase · era tags, "Recommended Reading", "Recent" eyebrows

```
// lib/theme.dart
textTheme: const TextTheme(
  headlineSmall: TextStyle(
    fontFamily: 'Poppins', fontSize: 24, fontWeight: FontWeight.bold,
  ),
  bodyMedium: TextStyle(
    fontFamily: 'Work Sans', fontSize: 15, fontWeight: FontWeight.normal, height: 1.5,
  ),
  labelSmall: TextStyle(
    fontFamily: 'Raleway', fontSize: 11, fontWeight: FontWeight.w600,
    letterSpacing: 1.6,
  ),
);
// pulled in with google_fonts, one line each, no asset files (unit page 11)
```

YOUR STYLE	FLUTTER SLOT	SIZE	WEIGHT	USED FOR
Heading	headlineSmall	24	700 (Bold)	screen titles, philosopher name
Body	bodyMedium	15	400 (Regular)	quote & biography copy
Caption	labelSmall	11	600 (SemiBold)	era tag, section eyebrows, timestamps

C. Spacing, as constants

Measured off the mockup's card padding and list gaps.

gap between list items (History rows, Recent tiles) — sm (8)

Base unit	4
Screen edge padding	16 (md) — Dashboard, History, Philosopher Card all pin content 16px from the edge
Gap between list items	8 (sm) — Recent row tiles, History rows, book tiles
Gap between sections	24 (lg) — header bar to content, quote card to accordion, accordion to "Recommended Reading"

```
class AppSpacing {
  static const double xs = 4;
  static const double sm = 8;
  static const double md = 16;
  static const double lg = 24;
}
// padding: const EdgeInsets.all(AppSpacing.md) everywhere
```

D. Components, as files STEP D

Every piece that repeats across the 4 mockup screens. Sketches below, real constructor parameters in the table.

COMPONENT	FILE	CONSTRUCTOR PARAMETERS	APPEARS ON
AppHeaderBar	lib/widgets/app_header_bar.dart	String title, String? subtitle, VoidCallback? onBack	Dashboard, Philosopher Card, History
RandomPickButton	lib/widgets/random_pick_button.dart	VoidCallback onPressed, bool isLoading	Dashboard
PhilosopherRow	lib/widgets/philosopher_row.dart	Philosopher philosopher, VoidCallback onTap, bool showQuote	Dashboard (Recent), History
QuoteCard	lib/widgets/quote_card.dart	String quote, String source	Philosopher Card
ExpandableSection	lib/widgets/expandable_section.dart	String title, String body, bool initiallyExpanded	Philosopher Card (Biography, Philosophy & Ideology)
BookTile	lib/widgets/book_tile.dart	String title, String author	Philosopher Card, inside a horizontal ListView.builder
TagChip	lib/widgets/tag_chip.dart	String label	Philosopher Card ("Stoicism"), History rows

Every component takes data and callbacks only — PhilosopherRow gets VoidCallback onTap, it never calls setState itself. All built const where the constructor allows it.

What changed, and why

ELEMENT	PRELIM SAID	NOW SAYS	WHY IT CHANGED
Palette	3 colors — primary teal and the light background were already right, but the third (middle) color was #C0BBB3, a warm beige-grey, nothing like a blue or teal	Same 3-color structure, but the middle color is now dark navy #0F2934, matched exactly to the mockup's header/border ink color	The app itself changed (Timely → ThoughtFull), and the new mockup settled on a teal-and-ink pairing instead of the old beige-grey — the middle role got swapped to match what the high-fidelity screens actually show
Type scale	Poppins / Raleway / Work Sans	Same three families — Poppins/headlineSmall, Work Sans/bodyMedium, Raleway/labelSmall	Kept as-is: the font choice never depended on which app this was, and the mockup's footer confirms all three are still in use, so this is a genuine "I kept it" row, not an oversight
Components	Plain rectangular placeholder blocks labelled "TBA" — no real components, and a completely different screen layout for the old Timely app	7 named components with real file paths and constructor parameters (AppHeaderBar, QuoteCard, ExpandableSection, etc.)	The whole app pivoted from Timely to ThoughtFull, so the prelim's blocks described screens that no longer exist — every component here is read directly off the new mockup's 4 screens instead
